Asamsung slightly modified the contour of the S4 galaxy, making it a little more rectangular, and added a chrome-plated band on the side, which gives the laptop a class look, although it is not actually metal. To accommodate the 5-inch display without increasing most of the device, Samsung reduced the width of the houses. As a result, the device has a Superior screen-to-body report compared to the S3, with an aesthetic added advantage granted by the central positioning of the Home button, which is now similar in shape to that of the Galaxy note 2. On the back, we have the Removable plastic cover that has sparked so many debates in the past. His detractors say he is fragile and that he can't evoke the feeling of award that you would expect from a state-of-the-art flagship. We found it intriguing, even if it has reminiscent to what LG has used on its latest high-end phones. The Galaxy S4 is actually more light and compact than the S3, an impressive result alone. Moreover, it feels better in hand, thanks to the most dishes and its excellent balance. We would leave a limb to say that the galaxy s4 has the best treatment of all the 5-inch smartphones we have reviewed.bottom line. if you liked the design and building the galaxy s3, the galaxy s4 will be familiar, but clearly refined. The Full HD panel of 441 PPI densitors is crisp how they get, and visibility, regardless of Observation conditions and angles, is top notch. The strengths of the AMOLED panel brand are highlighted by the combination of saturated and cheerful colors of the TouchWiz.Really user interface, the Galaxy S4 Sport one of the best displays on any smartphone, hands down. While the new Galaxy S4 is not head and shoulders over its competitors (unless you consider the elusive EXIYNOS 5 OCTA processor an innovative), you will not find better hardware on the market at this time. We value Snapdragon 600 (coming In the United States and most of the other major markets), and as you expect, we found little to Nitpick about it. Browse through the benchmarks, poised around an impressive 25,000 to Antutu. The EPIC CITADEL sets exclusively in front of the search for the 320 GPU chard graphics. It is worth remembering that the speaker of the galaxy s4 is practically as you would expect. It becomes properly noisy and gets the job done, although it would have been even better to have it on the front as the HTC boomsound. He can't win them all, it seems. However, it is not excessively metallic and should satisfy most people trying to share YouTube videos or videos. Sense all the things in which the galaxy s4 shone compared to the htc one, sony xperia z, or the apple iphone 5 is the wealth of the sensors that samsung has packed inside that slim body of 7.9 mm. In addition to the usual connectivity options, it came waiting by any decent Android phone these days, the S4 is equipped with a barometer, a temperature gauge, a RGB light sensor calibrating the display based on the environment, An IR Blaster (HTC also one and the Optimus G Pro), an infrared sensor for air gestures, a magnetic sensor to detect intelligent lids and a digital compass. All this list of sensor laundry is nothing without the software to make sense to all the data, but, for now, they say that the Galaxy S4 is well equipped in this sector. More in the software section. Battery life The S4 galaxy draws its power from a 2600 mAh removable battery, which is 500 mah more than the Galaxy s3. But the S4 has a larger display and a larger processor, so the difference in battery life is not so substantial at the end. We tested the resistance of the S4 galaxy in a movie streaming test (Netflix on Wi-Fi) has attracted the last drop of energy from it in a little less than four hours. In a less punitive test (navigation, watch local videos, enabled synchronization), the Galaxy S4 has crossed eight hours of continuous operation. Although it is not so impressive as the note 2, for example, we found the battery life of the Galaxy S4 to be satisfactory. Furthermore, the replaceable battery can act as a safety net.
