Naciśnij START, aby sprawdzić prędkość Internetu. Speedtest zajmie niecałą minutę. Trwa pomiar prędkości Twojego łącza internetowego. Test zajmie niecałą minutę. Kijk tv, surf en bel onbeperkt. Combineer al wat je nodig hebt in jouw pack. Direct naar inhoud { "@context": " ", "@type": "FAQPage", "mainEntity": [{ "@type": "Question", "name": "Wat voor internetverbinding biedt Ziggo?", "acceptedAnswer": { "@type": "Answer", "text": "Bij Ziggo krijg je internet waar je op kunt rekenen. Stabiel, snel en veilig via ons toekomstvaste glasvezel-kabel internet. En overal in huis perfecte wifi door SmartWifi. Toch een probleem met wifi? Onze Wifi Crew staat altijd voor je klaar. Meer weten over internet van Ziggo?

" } }, { "@type": "Question", "name": "Wat is de meerwaarde van zeer snel internet? ", "acceptedAnswer": { "@type": "Answer", "text": "De downloadsnelheid tot 1 gigabit per seconde komt neer op het tienvoudige van de gemiddelde 100 Mbit/s aansluiting in Nederland. Hiermee kunnen gezinnen op meerdere apparaten tegelijk 4K-films en tv-programma's bekijken en razendsnel downloaden. Zij halen een film van 5GB in 42 seconden binnen, terwijl dat ruim zeven minuten duurt met een huidig gemiddelde internetverbinding.

" } }, { "@type": "Question", "name": "Uit welke internetsnelheid kan ik kiezen bij Ziggo?", "acceptedAnswer": { "@type": "Answer", "text": "Je kan kiezen uit een downloadsnelheid van 100, 400 of 1000 Mbit/s. We bieden internet aan in verschillende pakketten, zo hebben we Alles-in-1 met Internet, TV & Bellen. Je kan ook kiezen voor een pakket zonder bellen: Internet & TV. Daarnaast hebben we ook een pakket met alleen Internet & Online TV. " } }, { "@type": "Question", "name": "Wat is download- en uploadsnelheid?", "acceptedAnswer": { "@type": "Answer", "text": "Downloadsnelheid is de snelheid waarmee je dingen kunt binnenhalen vanaf internet naar je computer. Denk aan je e-mails, of een filmpje dat iemand naar je heeft gestuurd. Uploadsnelheid is de snelheid waarmee je dingen kunt versturen via internet. Dus foto's van dat feestje dat je naar vrienden stuurt, of een presentatie voor je werk die je thuis hebt gemaakt. De download- en uploadsnelheid wordt aangeduid in Mbit/s, voluit megabit per seconde. " } }, { "@type": "Question", "name": "Ik heb nog geen internet van Ziggo. Wanneer kan ik overstappen?", "acceptedAnswer": { "@type": "Answer", "text": "Check eerst wat je huidige contract- en opzegtermijn is. Dat is handig, want zo voorkom je dubbele kosten. Tijdens je online bestelling kun je kiezen voor de Overstapservice. Wij zeggen dan voor je op bij je oude provider en regelen dat je niet zonder televisie, internet of bellen komt te zitten. Je kunt de Overstapservice gebruiken als de overstapdatum minimaal 30 dagen en maximaal 90 dagen in de toekomst ligt.

" } }] } 0 * Your network is unstable. This number represents our estimate but actual network performance may vary * Could not reach our servers to perform the test. You may not be connected to the internet PC / Mac Applications available Be the first one to test our app for Mac or PC with streaming and browsing tests included. Try it now Test your ADSL, xDSL, cable, optical fiber or satellite broadband connection bandwidth. Latest Internet connection barometers Barometer of fixed internet connections in Latvia Year 2024 Latvia 2024 Open Download bitrateIndicates the amount of data your connection can receive in one second from the nPerf server. The highest the measured value, the best is the bitrate of your connection. Upload bitrateIndicates the amount of data your connection can send in one second to the nPerf server. The highest the measured value, the best is the bitrate of your connection. Latency (ping)Indicates the delay a small packet of data requires to make a round-trip from your computer to the nPerf server. The shorter the delay, the most reactive is your connection. nPerf qualify accurately your internet connection's performances. This speed test relies on an exclusive algorithm allowing you to measure accurately download bitrate, upload bitrate and latency of your connection.nPerf uses a worldwide dedicated servers network, which is optimized to deliver enough bitrate to saturate your connection, so that we can measure its bitrate accurately.nPerf speed test is compatible with all broadband and mobile connections: ADSL, VDSL, cable, optical fiber FTTH / FTTB, satellite, wifi, wimax, cellular 2G / 3G / 4G (LTE), 5G.The nPerf speed test has been designed by telecom enthusiasts to enable you to accurately measure the speed of your Internet connection easily, in only one click! Oh... and this speed test is absolutely free of ads! Enjoy it ... and if you like it, spread the word :) This speed test uses WebSocket technology for accurate measuring your real Internet connection speed. The best server is automatically selected when you start the test. The following parameters are measured when the test is run: PING (or LATENCY) - the network delays in milliseconds [ms] when the data is sent between your computer and the Internet. This is the most important parameter when we are talking about online games or calls. Latency time strongly depends on distance between you and the reference server. The longer distance, the bigger latency value is expected. Typical ping values in domestic networks should not exceed 50 ms. But for example at the distance between United States and Europe the ping may be between 100 and 150 ms. DOWNLOAD - the data getting speed from the Internet measured as amount of data divided by the time of data sending and shown in Mega Bytes per second (Mb/s, Mbps). The download speed depends is measured using TCP (WebSocket) procol so it depends on network latency. In other words, if the ping value is biger the connection will reach its maximum throughput in a longer time. UPLOAD - the data sending speed to the Internet measured in the same way as in case of download and shown also in Mb/s. Most people assume that 5G base stations will have a small range, which will force their dense installation. The American branch of T-Mobile knows a different solution to this problem. It consists in using the 600 MHz network cov... Read more... The base stations are connected to the backhaul network by fiber optic or radio links. Which ones are better? Ericsson and the German department of T-Mobile assume that both technologies are just as good. Recently, they managed t... Read more... Players have always been combining how to make the multiplayer games easier. In the network you can find many tips on how to set a given game for better results. However, some Battlefield V players have gone too far, and they hav... Read more... We are all waiting for the presentation of the first 5G smartphones. Therefore, we happen to forget that the first devices that will allow us to use the new technology will be Wi-Fi routers with 5G modems. One of them is NETGEAR ... Read more...
