Best music maker software for pc free download

CanSurv is a Microsoft Windows application and can only be used on a Mac in conjunction with a Windows emulator. Before downloading CanSurv version 1.4, you must read and sign the Terms of Use Agreement below and complete the registration form. After completing the form you will receive an e-mail with a link to the software download. The download link will expire after 24 hours. If your link has expired, request a new one using the Already Registered? form. Thank you for your interest in using CanSurv to analyze population-based survival data. For grouped survival data, it can fit both the standard survival models and the mixture cure survival models and provides various graphs for model diagnosis. It can also fit parametric (cure) survival models to individually-listed data. Please review the following terms carefully. "Provider": the National Cancer Institute"Recipient": the party who receives software materials from the Provider under this agreement"Software": CanSurv, a statistical software program developed by IMS, Inc. under contract for the NCIThe Provider and Recipient agree as follows:The Recipient agrees to not attempt to reverse engineer the Software. Recipient agrees to comply with all Federal regulations applicable to research projects and handling of research materials. Software will not be used by Recipient as an agent, device, or instrument of treatment or intervention in research with human subjects where such use would require the approval of an Institutional Review Board. The Recipient agrees to not use the Software for diagnostic purposes in human subjects. If Recipient desires to sell its own commercial software that incorporates the Software or use Software for commercial purposes or applications (including consulting), Recipient will contact the NCI Technology Transfer Center (attention: Technology Transfer Manager for the NCI Division of Cancer Control and Population Sciences) at ncitechtransfer@mail.nih.gov.Title in the Software shall remain with the Provider. It is understood that nothing herein shall be deemed to constitute, by implication or otherwise, the grant to either Party by the other of any license or other rights under any patent, patent application or other intellectual property right or interest. Provider reserves the right to distribute Software to others and to use it for Provider's own purposes. Recipient agrees that any of its publications or presentations utilizing this Software will include appropriate acknowledgement of Provider's contribution of the Software and will include the citation found at: . The Provider and Recipient each shall retain, subject to applicable laws, title to any patent, copyright, trademark, or other intellectual property of their respective employees developed or created using the Software. Neither Provider nor Recipient promise rights in advance for inventions developed under this Agreement. If the Recipient creates an invention containing the Software ("Recipient Invention") and wishes to patent the Recipient Invention, Recipient agrees to notify the Provider of the Recipient Invention prior to seeking patent protection and to work in good faith with the Provider to determine the inventive contributions of the Recipient and Provider. In the event the Recipient wishes to distribute a Recipient Invention to third parties, the Recipient will ensure that the third party is advised of the presence of the Software and of the Provider's rights therein.Software is supplied AS IS, without any accompanying services or improvements from Provider. SOFTWARE IS SUPPLIED TO RECIPIENT WITH NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Provider makes no representations that the use of Software will not infringe any patent or proprietary rights of third parties. Provider does not endorse the results of any analyses derived from the software's use, and the Recipient agrees not to claim endorsement of such results and analyses by the Provider or the United States Government. Recipient agrees not to describe statistical calculations conducted in the absence of CanSurv as if they had been calculated by CanSurv.Recipient represents and warrants that the Official accepting this Agreement is authorized to do so. If you have already registered but need another link to download the software, enter your e-mail address below. Home Enterprise Applications High-quality PC audio is important to me, as I spend a lot of time listening to music on my desktop. In previous columns I've discussed the aural advantages of lossless audio codecs (like FLAC), discrete sound cards, and specialty music player software. Alas, even with all of those tools installed and properly configured, it is possible to suffer less-than-optimal sound on a Windows XP-based PC, as the operating system has a tendency to muck with music without your consent. Happily, a free, easy-to-use program, called ASIO4ALL, addresses this annoying Windows habit. (I'm told that the app can improve sound on Vista PCs, too, but I have not tested that claim.)So how does XP interfere with your music? Simply put, the OS hands off audio chores to a piece of software called the Kernel Audio Mixer, or Kmixer, which automatically resamples audio files--oftentimes rather poorly--creating output that differs from the original recording. The effect is typically pretty subtle, and if you are listening to low-bit-rate MP3s you probably won't notice it. However, if you're like me and you listen to lossless audio because you prefer to hear music the way the artist recorded it, you can use ASIO4ALL to do an end run around Kmixer, sending an unadulterated version of the audio right to your sound card. Musicians who record using PC hardware have long used ASIO, which stands for Audio Stream Input Output. Mid- to pro-level hardware may include drivers with ASIO support, but lower-end hardware--such as integrated motherboard audio chips and some basic sound cards--tend not to. So an enterprising gentleman named Michael Tippach created ASIO4ALL. He says the original goal was to address the latency issues that Kmixer introduced into the audio recording process. It was only later that audiophiles started using it to achieve better audio from their PCs.To use ASIO4ALL, you'll need a compatible media player, such as foobar2000 or WinAmp (Windows Media Player and iTunes don't support it). I recommend installing foobar2000. You also need to download the foobar2000 ASIO DLL (click on the Optional Components link on the foobar2000 site); the DLL file should go into foobar2000's Components folder on your hard drive.Next, download and install ASIO4ALL itself. Launch it by clicking on its Off-line Settings option in the Start menu. You should see your computer's audio device highlighted; if you have more than one, select the one you intend to use.Now launch foobar2000. Navigate to File, Preferences, and choose Output. In the resulting dialog box, select Output (under Playback), and then ASIO Virtual Devices, before clicking the Add New button. A new dialog box should appear with your audio device and various mapping coordinates (left, right, and so on) listed. Select one, then click OK, Save All, and Close. Return to your music collection, fire up your favorite reference (highest quality or original recording) tunes, and start listening. You should hear a noticeable improvement in audio quality with even the default (Simple) settings. I'm confident you'll get better audio through ASIO4ALL. And remember: It doesn't change anything in your drivers, so if you're not happy with the results, you can simply stop using it. This story, "Better Music, From Your PC, for Free" was originally published by PCWorld. Note: When you purchase something after clicking links in our articles, we may earn a small commission. Read our affiliate link policy for more details. Image Credit: Pixland/Pixland/Getty Images At times you may need to find the most recently downloaded files on your PC. Luckily, most browsers store their files in one default folder, to save you searching for that file you just downloaded. The most widely used browsers, Firefox and Internet Explorer, both save downloads to this default folder unless a different location is specified. You can find your most recent downloads by simply navigating to this folder. Click "Star," "My Computer," "C Drive," "Users," "Your Name" and "Downloads." This is the default folder that Internet Explorer saves download to. Check to see if there is a heading labeled "Date Created." If there is no Date Created column, right-click the "Name" heading and select "Date Created." The Date Created column will now appear next to the Name column. Click the "Date Created" heading to display the most recently downloaded files at the top of the window. Browse the files at the top of the list to see the most recent downloads. Click "Tools" and then "Downloads." Browse the downloads window to see the most recent files. Downloaded files are automatically displayed with the most recent downloads at the top. Don't worry: as long as you didn't cancel the download process, you can find your file! Image Credit: LeafenLin/Stock/Getty Images The first place to look for a recently downloaded file is the Downloads folder. In Windows 8, you can access the folder from the File Explorer window. If you are not able to locate your download there, the next place to check is the download manager of the Web browser you used to obtain the file. Knowing where to view recent downloads in Internet Explorer, Google Chrome and Mozilla Firefox will enable you to quickly locate the files you want. Open Internet Explorer and click the "Tools" icon on the toolbar or press "Alt-X" to open the menu. Click "View Downloads" or press "Ctrl-J" to open the View Downloads menu. Click on the downloaded file you wish to access or type a keyword into the Search Downloads menu. Open Chrome and click the "Chrome Menu" button to view the menu. Click on "Downloads" or press "Ctrl-J" to view your recent downloads. Click on the downloaded file you wish to access or type a keyword into the Search Downloads box to find the download you want. Open Firefox and click the "Downloads" button on the toolbar, resembling a down arrow. Click on the downloaded file you wish to access. Click "Show All Downloads" at the bottom of the Downloads panel to access the Downloads Library. A quick way to access the Windows Downloads folder is to use the keyboard shortcut "Windows Key-E," which opens File Explorer (called Windows Explorer in Windows 7 and earlier versions). The Downloads folder should be listed in the Favorites section. You can also scroll down and expand your user name to find the folder.
