## Wood block puzzle game download

Games are supposed to relax us. Take our mind off our troubles, perhaps, and provide us some entertainment as we melt into a friendly competition with others, or even against ourselves.Not these games.The games you'll read about here are puzzle games -- and not the cute little jigsaws you do with your niece. Some of the games are simply ones you cannot quit playing because each victory high is followed by a challenge you're positive will bring even higher euphoria. Some are truly challenging, requiring actual skill that will make you unable to leave a game unfinished. And yet others have some magical blend of both. As we attempt to plan, configure and rearrange, we lose our minds on something we so casually refer to as a game.Let's explore the world of puzzle games that will leave you wild-eyed and foaming at the mouth for more. Remember: you can stop at anytime. You just don't want to.Yup, it's old-school. It's low-tech. It's a toy almost everyone had (and kind of hated for its inability to transform into a robot or shoot lasers). But the Rubik's Cube persists as the epitome of the unsophisticated, maddening puzzle that doubles as an innocent toy for children.The Rubik's Cube was invented by a Hungarian by the name of -- you guessed it -- Rubik. Although Mr. Rubik originally titled the toy, the "Magic Cube," when it began exporting out of Hungary it was renamed for the inventor. (Thus, don't forget that apostrophe in the name!) The cube itself is a three-dimensional square, each of the six sides has a 3 by 3 grid, with each square one of six colors. You can pivot the rows and columns, and the goal is to get each face of the Rubik's Cube to consist of all same-colored squares.And while there are loads of ways to solve a Rubik's Cube, that doesn't mean most of us can do it without some serious curses and gnashing of teeth. Lucky for us, after hours are spent hopelessly turning and swearing, you can easily go online and find out ways to make the puzzle bend to your will. (Don't be discouraged that children who haven't yet graduated elementary school write many of the solutions.) You can also practice your Rubik's Cube skills by playing online games of the toy, but be warned: you don't get that satisfying feeling of throwing the cube against the wall after hours of fruitless twisting.While it sounds like a mother's pet name for her little Kenneth, KENKEN isn't a game of cutesy characters. Developed in 2004, it is the brainchild of Tetsuya Miyamoto, a Japanese mathematician. Miyamoto was looking for a puzzle that might allow students to better grasp some fairly simple logic and math principles. After becoming a hit in Japan, it was introduced to the United States in 2008, and soon the puzzles were being run in the New York Times and other publications.Much like Sudoku, KENKEN is a grid-based puzzle game. (Grids might be anywhere from 3 by 3 to 9 by 9; the larger the grid, the harder it is.) The grid has a few numbers filled in on it: Your job is to complete the grid with digits so no digit is repeated in any row or column. Easy, right? Well, there are also outlined boxes within the grid, and you have to make sure all the squares in that box combine to make the number listed in the corner.Sound easy? Well, some are. And some of the puzzles are so maddeningly challenging that you will swear the evil genius who wrote them is using numbers not of this world. As we said, you can find it as a daily feature in quite a few papers, there are loads of KENKEN puzzle books and you can even find online games to play. (Just remember to take breaks to eat.)Chuzzles may just be some of the darned cutest substances to ever cause someone a somewhat debilitating addiction. Chuzzle is a computer game that can be played on multiple platforms -- computer, Web or app. Also like Tetris, it involves moving matching game pieces into groups.Chuzzles are adorable little furballs with big eyes that look very expectantly at you to make a good move. The chuzzles -- all different colors -- are lined up on a grid. You can move rows left and right, columns up and down. You're attempting to group three like-colored Chuzzles in a row. When you do, they pop off the screen. After getting a certain number, you move on to harder levels.As with most puzzle games, it's not entirely easy to pinpoint why the game is so fun and addictive. One point for Chuzzle? Its relentless soundtrack, which manages to be both pulsing and hypnotic. If you don't find the game addicting, you still might find yourself bouncing along to the song, long after Chuzzle has ended.If you haven't played Sudoku, you probably have at least one friend who has earnestly tried to convince you that it's one of the best ways to waste your time. And if you just have a second, they'd be happy to show you right now exactly how it works. Sudoku converts are a rabid bunch.But there's a reason for it. Sudoku is pretty easy to set up: You have a 9x9 grid, and within the grid are nine 3x3 squares. The grid is sparsely populated with a few numbers. Your goal is to make each column and row contain the numbers 1 through 9 -- no repeats. Beyond that, you must make sure each 3 by 3 box contains the numbers 1 through 9.A Sudoku rookie might be surprised, then, to learn there's actually no math involved at all -- which means that even children can become obsessive about filling little squares with numbers. And for those kiddos who cannot abide by the pencil-and-paper version available in many books or daily newspapers (or perhaps don't recognize a hard copy of a newspaper), there are tons of online versions to play.Tetris basically defines "addictive" for an entire generation. Initially developed by a Russian and based on an ancient Roman game, Tetris was introduced to a wide audience through a software version developed for IBM. From there, it spread to the Nintendo gaming console, Gameboys, other home computers. Soon, pretty much everyone knew how to play Tetris, and had--at one time or another--become a bleary-eyed Tetris zealot.The game is simple enough. Tetrominoes are shapes made up of little squares. The pieces all have different shapes and colors. The pieces fall down a kind of well, and you can rotate the shapes as they fall. The object is to get an entire horizontal row of squares (without any holes). When a row is completed, it disappears. But the tetrominoes fall fast and hard, and if you don't clear your squares before they're stacked to the top, you're out of luck.The game is so addictive, in fact, that players may start seeing possible Tetris configurations in their daily life -- unevenly stacked books, a brick side of a building, or even dreams. It's so well-known, in fact, that it's given a name -- the "Tetris Effect."Goldsmith, Jeffrey. "This is your brain on Tetris." Wired.com. May 1994. (June 14, 2012) s NES Archive "The Tetris Saga." 2000. (June 14, 2012) LLC. "Starter Strategies." 2012. (June 14, 2012) Ed Jr. "Sudoku variations." Mathematical Association of America. Sept. 6, 2005. (June 14, 2012) Games. "Chuzzle." 2012. (June 14, 2012) Towns Ltd. "Rubik's Official Web site." 2012. (June 14, 2012) Holding. "Tetris Official Web site." 2012. (June 14, 2012) Puzzle games used to be a simple genre with a simple idea. You solve puzzles for time killing enjoyment. However, the genre ballooned in a big way on mobile. In fact, it's one of the most popular genres on the entire platform. It started with simple viral games like 2048 and evolved into genuinely enjoyable experiences like Monument Valley.These days, you can find some seriously good puzzle games on Android in terms of both graphics and game play. Gone are the days of super simple mechanics and graphics with goofy ideas, with intense and complex apps with creative stories and good graphics. This list changes fast as new puzzle champions emerge. Here are the best puzzle games for Android.Amanita Design is a publisher on Google Play. They have three very excellent puzzle games with Samorost 3, Botanicula, Chuchel and the popular classic Machinarium. All three games feature fun puzzles, a distinctive art style, and simple game mechanics. Basically, you wander around the game world in search of clues and puzzle solutions. They each have fun little stories as well. All four games go for \$4.99 up front. However, there are no in-app purchases after you purchase the game. Price: Free / \$2.99 / Up to \$9.99Blue Wizard Digital is a developer on Google Play. They have two excellent puzzle games. The first is Slayaway Camp. You play a serial killer and you avoid the cops while you slaughter people. The second is Friday the 13th. It has a lot of the same ideas, but over 100 levels of gory goodness. These games are not for children or adults with weak stomachs. They otherwise make for outstanding horror-puzzle games. Slayaway Camp goes for \$2.99. Friday the 13th is a free download with in-app purchases, but it's not a freemium game. Bridge Constructor Portal is a cross-over game between Bridge Constructor and Portal. The game has primarily Bridge Constructor mechanics. You build a bridge from one end of the level to the other with a variety of strategy and parts. The Portal mechanics make each level more fun and difficult. It contains 60 levels (test chambers), plenty of Portal references (including voice acting), and some extra stuff like Google Play Games achievements. Bridge Constructor Portal goes for \$4.99 with no in-app purchases or ads. It's an excellent puzzle game. This game is also free to play for folks with Google Play Pass. The developer, Headup, also recently launched Bridge Constructor: The Walking Dead (Google Play link) if you prefer a zombie theme. This game is also free if you have Google Play Pass. The Eyes of Ara is one of the newer puzzle games on the list. It reminds us a lot of classic puzzle-adventure games like Myst. Players explore a world looking for clues, unlocking secrets, and gathering the story from snippets of story from the game world. It plays in a 3D world with exploration and surprisingly decent graphics. The developers round out the experience with achievements, support for about a dozen languages, and a minimal game UI that puts the game world first and foremost. There isn't a whole lot wrong with this one, but the controls are occasionally wonky. Faraway 3: Arctic Escape is another newer puzzle game from 2018. It features a variety of puzzles similar to console games like The Witness. You have various boards and each board needs solved. The game has 18 stages with a variety of puzzles in each one along with a story line. This is also the third game in the series and the previous two are pretty good as well. The three together should provide a decent amount of entertainment. The third one has nine free levels and the rest cost \$3.99. The previous games are also fairly inexpensive. Gorogoa is an excellent puzzle game. The game shows you a few illustrated panels. Players put the panels in order to tell a story. The game has thousands of illustrations for you to organize, all of which feed into the game's main story line. It relies heavily on the artwork to convey the story rather than making the player read a bunch of stuff. It's an interesting method of storytelling and the puzzle elements are simple enough to do. This is a great puzzle game. Price: Free trial / \$14.99Hello Neighbor is one of the most unique puzzle games on mobile. Your neighbor is doing some weird stuff and you want to check it out. Thus, you break into the house over and over again. The neighbor sets up defenses after each break-in based on your entry and exist strategies. You have to adjust your strategies accordingly. This was a very popular game on PC and the mobile game plays about the same but with mobile controls. There are also horror and thriller elements with this one. This one is rather expensive. The criticism is a little more harsh due to its price tag. However, it's still a good game with a unique premise. Price: Free / Up to \$8.99-\$11.99 eachLife is Strange is an outstanding adventure-puzzle-drama game. It follows the life of a Max, a high school girl with special powers. She can rewind and replay various moments in her life. You rewind and redo various moments until you get the desired results. This is a port of a console game and a pretty good one, too. The graphics and mechanics are good and the story is entertaining. There is a prequel for this game available as well, but it might need an update or two before we would fully recommend it. This may not be a puzzle game in the classic sense, but the main mechanic is a puzzle element so we're counting it. Life is Strange: Before the Storm adds to the story quite a bit, but it's a little rougher around the edges than the first game. Price: \$3.99 + \$1.99 / \$4.99Monument Valley 1 and 2 are some of the most popular puzzle games on mobile. They use MC Escher-inspired puzzle mechanics. You twist and turn portions of the level in order to progress. The games aren't difficult. They boast a more relaxing experience rather than challenging. The Monument Valley games do look fantastic, though. The art style is definitely to be applauded. The first game includes a handful of levels along with the Forgotten Shores DLC (\$1.99 extra). The second game is a bit longer but not by much. These are classics. Part Time UFO is a goofy puzzle game from the developers of Kirby. Yes, the adorable pink puff ball that eats stuff. You fly around in a UFO while doing odd jobs for the village townspeople. Each job is a puzzle. The game has a variety of colorful characters, plenty of levels and puzzles, and even some stuff to unlock. It also has Google Play Games support for achievements. The game goes for \$3.99 with no in-app purchases or advertisements. It's not the most graphically intense game out there, but we like it anyway. The Professor Layton franchise is a series of puzzle games from the Nintendo DS. The developers, Level-5, have brought a few of them to Android as mobile ports. You can get Layton: Curious Village, Layton: Diabolical Box, and Layton's Mystery Journey on Google Play. The series puts you on an adventure to solve puzzles and solve cases for Professor Layton. The games features comical dialog along with goofy situations that help sculpt the atmosphere of these games. They are rather expensive, though, so we recommend playing as much as possible in the refund time to make sure you like them. Price: \$0.99 / \$1.99 / \$3.99 / \$4.99The Room franchise is one of the oldest and most successful puzzle game franchises on mobile. There are four games in the series at the time of this writing. The first two are classic puzzle games. You figure out puzzles to progress until you finish the game. The third game in the series introduced multiple endings and a slightly heavier narrative. Finally, the most recent game, Old Sins, takes place in a dollhouse. All four games have some similar elements, including outstanding graphics, escape room elements, and clever puzzle designs. They are also usually fairly short games. However, the inclusion of multiple endings gives the later titles some replay value. These are classics in the puzzle game space on mobile and we recommend them highly. The first game in the series is \$0.99 and the most recent is \$4.99. The other two fall between those two price tags. None of them have in-app purchases or ads. ROOMS: The Toymaker's Mansion is one of the newer puzzle games on the list. It's a fairly simple puzzle game at heart. You move through a mansion and each room moves like a puzzle piece. You assemble the puzzle pieces to continue on the journey. The game contains 144 total levels across four mansions. Players also unlock special abilities like transportation bombs, and the ability to move every room at once. There are 96 story levels and 46 special ability levels to keep things a little bit fresh. There is more than enough content here to justify the title's \$4.99 price tag and there are no in-app purchases or ads to ruin anything. Price: Free / Varies per gameRusty Lake is one of the most popular puzzle game developers on Google Play. There are two different franchises by Rusty Lake. The Cube Escape series is a long-running series of puzzle games with escape room and hidden object puzzle elements. Most of those games are free except the most recent one, Cube Escape: Paradox (it costs \$1.99 for the full version). The other series, Rusty Lake, is a more premium point-and-click adventure-puzzle game that takes place in the same universe as the Cube Escape series. These usually cost money, but never more than a few bucks. There are usually one or two new additions to each franchise every year and they're all pretty good. Vodobanka is one of the more unique puzzle games on Android. The player takes control of a SWAT team. The goal is to breach a structure and get the hostile people before they execute the hostages. It has a bunch of levels, including some added as recently as 2021. It doesn't have the best graphics, but the concept is pretty neat as players clear rooms on their way to the objective. The premium version is also inexpensive with most of the content being available in the free version.
