Reflection Ray Diagram

The Task:

- 1) Align the mirror with the line labelled 'plane mirror'.
- 2) Move the ray box so that the ray of light travels along the path labelled 'incident ray'.
- 3) Using a ruler, draw the path of the reflected ray and label it.
- 4) Use a protractor to measure the angle of reflection – the angle between the reflected ray and the normal. Label the angle of reflection on your diagram.
- 5) Repeat the experiment but this time adjust the ray box so that you have a different angle of incidence.

The Question:

What is the relationship between the angle of incidence and the angle of reflection?
