Tropedia is a community-edited wiki website dedicated to accessing Creators, Works, and Tropes -- the people, projects and patterns of creative writing in all kinds of entertainment: television, literature, movies, video games, and more.Tropes are tools of the trade for writers; They are devices and conventions that we the audience expect to see again and again. Whether tropes are cliché or just standard for the genre is largely a matter of writing quality and personal opinion. But tropes will always exist, as they often reflect life -- and we exist to document them, play with them, and generally have fun with them.The name Tropedia is a portmanteau of "tropes" and "encyclopedia". We want to encourage creative thought, discuss new works, and welcome everyone to play around. This is not Wikipedia, this is a site for fans. The wiki used to be called All The Tropes, but behind-the-scenes drama in 2021 forced us to change the name.We hope to educate and entertain -- to be both informal and informative. And we hope that you'll join us.So read, edit, have fun, and play nice!On Use of Wikimedia ContentWe are fierce advocates of the free content reuse policy of Wikimedia Foundation and our site license and reuse policy was modeled on their own because we want to share our content with the world, and don't believe it should be hoarded or used to make a profit (except as CC-BY-SA allows), because like the WMF, we believe knowledge should be free, and since you can reuse WMF content (with proper attribution), please check out the following WMF wikis for anything you might wish to use for pages here:
Magical Girl Known as mahou shoujo (, "magical girl") in Japanese, or simply majokko (, "witch girl"), Magical Girls are empowered by various means with fantastic powers that both assist and complicate their lives, but manage to persevere despite this.Magical Girls have high crossover popularity in different demographics with some minor but appropriate design modifications, and make up a sizable portion of both Shojō and bishōjou fandom.Read more...

The first version of Minecraft was released as Minecraft 1.18 update, titled Caves and Cliffs Part I, bearing many past updates regarding the game. It gave an entirely new look to the overworld. However, it received few updates in many years. As a long wait, Mijang finally decided to revamp both these features. Minecraft 1.18 update is Mojang's most ambitious project, as they spent a long time working on improving the world generation.Five months after the 1.17 update, Mojang released Minecraft Caves and Cliffs Part II, featuring mega mountains and caves. The 1.18 update was released for both edions and all supported devices on November 30, 2021. Minecraft 1.18 update is available for Android devices On Tuesday, November 30, 2021, Mojang released the biggest update in Minecraft's history, the Caves and Cliffs Part 2. It is also the third update released for Java and Bedrock Edition on the same day.Minecraft 1.18 update can officially be downloaded on Android devices using the Google PlayStore. Follow these steps to download Minecraft Caves and Cliffs Part II update for Android devices:Open Google PlayStore.Players will have to search for Minecraft. Click here to get redirected.Go to Minecraft's official page on PlayStore.If Minecraft is already installed, players will get the option to update to version 1.18. Otherwise, players can download the latest Minecraft version. That's it. Downloading Minecraft updates on Android devices is pretty simple to do for anybody. After downloading Minecraft 1.18 update, players can move their old worlds to version 1.18 without worrying about anything else. Minecraft developers have worked hard on smoothening the biome, blending between old chunks and new chunks. Players would hardly notice any difference when moving from older to fresh chunks. What's new in Minecraft 1.18 update? Minecraft 1.18 update revolutionized the entire Overworld generation. The bottom of the world has been shifted to Y -64 from 0. The upper build limit has also been increased to Y 320 from Y 256.New caves and mountains are the real reason behind such drastic changes to the build limit. Minecraft 1.18 update adds new caves and mountain biomes. Mountains can reach an extreme height of Y 256, while caves generate deep down to Y 59.Minecraft 1.18 update is filled with game-changing features and changes, such as mob spawning changes, raw copper drop rate, etc. Players can't play Caves and Cliffs Part 2 to explore the surreal yet beautiful world generated by the author. About the author: Quick LinksEdited by Masoo SchneiderMinecraft is one of the most popular games on Android, though it's not officially featured as the Java edition of the game that you'll find on desktop. You're incredibly limited on the servers you can play on, and of course, Java players have an easier time modding their game, too. However, it's actually possible to play Java Minecraft on your smartphone, and it's surprisingly easy to set up. You can play on Android, jailbroken iOS devices, and Chromebooks. I had great success playing the game on my Google Pixel 6 Pro, though you'll have better results on any of the best phones with an Adreno-based GPU such as the OnePlus 9 Pro. Be warned: you'll need to employ a workaround to play Minecraft 1.17.1 as well, and the latest Cliffs & Caves Part 2 update (version 1.18.1) also requires a number of complex steps. You can check out the official Pojav Launcher website to find out more information, including how to install Optifine or Forge. Still, this works surprisingly well, and there's even a mouse pointer and touch controls that you can use for navigating menus. You can use Forge Launcher up to 1.16.5 for a modded experience, and Fabric is supported as well. The launcher is completely open-source on GitHub. Incredibly, I had better performance on the Google Pixel 6 Pro than I've seen on some laptops, and that was without any optimisation whatsoever. The most annoying part of the experience is that you can't easily click by tapping -- you need to hold down on the screen to use a weapon. This gets complicated when playing on PvP servers. There are some known issues when playing using Pojav Launcher, which are outlined below: Minecraft21w10a or newer are currently not yet supported due to the new GLSL usage. A workaround is provided and built into the launcher. In 1.16 and up, spawn eggs banners are white (you can fix this by switching renderer tog4es1.1.5, only works on 1.16 and up, do not use under this version, as the texture will bug out when hitting a mob) Controller mods aren't working. Random crashes can happen often on Android 5.x during game load or join world. With big modpacks textures could be messed up We would like to warn users that you will be required to log in to their Microsoft or Mojang accounts using the app, and that it is at your own risk that you do so. The source code for Pojav Launcher is available on GitHub, and the safest way to test it out is to audit the source code and build it yourself following the official instructions. I have been using it with my personal Minecraft account with the launcher downloaded from the Google Play Store. Minimum: Devices with Android 5.0 (or later) and 1.5GB RAM Recommended: Devices with Android 8.0 (or later) and 4GB RAM Minimum: A Chromebook that supports Android apps with 2GB RAM Recommended: An ARM Chromebook that supports Android apps with 4GB RAM Minimum: Any iOS device with iOS 12 or later. Recommended: Any iOS device with iOS 14 or later, and an A10(X) chip or later. Requires jailbreaking to run the launcher. To get started, you'll need to download Pojav Launcher on the Google Play Store. It's a launcher that mirrors the Minecraft launcher on desktop and requires you to log in to your Mojang account. It downloads all of the necessary files including game assets from Mojang's servers and even packs its own Java Runtime Environment (JRE). Once you have the app installed, log in to your Minecraft account. Be sure to tap "keep logged in", so that next time, you can tap "select account" instead. Choose the version of the game that you want to play and click play. It's a pretty simple process for earlier versions of the game, however, gets more complex with newer versions. For playing Minecraft 1.17, you'll need to download JRE 17 for your specific device and change the renderer from the settings accessed in the bottom right. Select runtime manager, add your new JRE17 zip file and then change your renderer to gl4es 1.1.5 with OpenGL ES 3. It will say "no 1.17 supported yet", but if you have JRE 17, then it is supported. You can also increase the amount of RAM designated to the JVM from the settings, which might be worthwhile doing if you run into performance issues, especially if you're playing with mods. You can then click "play", and if you get a warning in a dialogue box, click "play anyway". While you should follow the official instructions on how to install Optifine in Pojav Launcher, you may come across difficulties when trying to copy files to the /sdcard/Android/data/net.kdt.pojavlauncher/debug/files/.minecraft folder thanks to Android 11's Scoped Storage changes. You can use the internal Android file explorer or a computer to do this, and you may need to modify different files in depending on the version you're configuring. Installing the custom resource pack for version 1.18 will require navigating to this folder, and so will installing certain mods for your game. As for installing Optifine, that will also require switching back to both the internal Java JRE, and to the original gl4es renderer. Not switching will cause the Optifine g4es renderer. Not switching will cause the Optifine installer to crash when launching, though once installed, you'll need to switch back again to JRE17 and gl4es 1.5 with OpenGL ES 3 to actually play. It's complex and it can be easy to lose track of what you need to do, so your best bet is just to follow the instructions carefully to ensure that you do it right. If you have performance problems, there are a number of things you can try. The most important is lowering the resolution, which you can do from the launcher's settings. Failing that, you can also follow the official optimization guide on the Pojav Launcher website, which has a link to a pack of mods for Fabric 1.16.5 that may improve your performance. While nearly all of the mods are aimed at improving performance, there are one or two in the pack that are also included for quality of life improvements. Some mods in the pack include: Sodium, a new rendering engine. Starlight, a rework of the light engine. FerriteCore, to reduce memory usage. Smoothboot, to reduce the load times for lower-end devices. OKZoomer, for OptiFine zoom controls. NotEnoughCrashes, to report more details on crash logs and allow you to keep playing. Minecraft Java Edition can often be a taxing game to run on lower-end laptops, but many users have had great experiences running it on their smartphones. While it's not perfect, it might be the best way you can enjoy the game with some of your friends if they play on a Java Edition server and your computer or laptop isn't powerful enough to run the Java edition of the game. This repository was archived by the owner on May 18, 2025. It is now read-only. You can't perform that action at this time. Among all the sandbox games available in the market, Minecraft offers some of the most amazing survival worlds to explore and put yourself up to a challenge. So we are stepping in to bring you a list of the best Minecraft survival seeds to ever exist. From strange and distant islands to glitched structures, there is something for everyone. So, without wasting more time, lets find the perfect seed for your next survival adventure. If you play Minecraft regularly, you must already know that villagers and Pillagers are the most loathsome enemies. The Pillagers attack the Minecraft villagers at sight as they try to live as fast as they can. In an ideal world, you would want to keep villagers as far away from Pillagers as possible. But pushing their survival off the edge, the villagers in this seed reside right within the biggest Pillager structure in the game. Not too far from the spawn, you get a weird combination of a Woodland Mansion and a plains village. The glitched structures are not only bizarre but also kind of hilarious. However, the villagers who get hunted as soon as they spawn might not agree with me. Seed: -3108046692834219444 Coordinates: 100, 70, 100 (Java) The caves of each Minecraft world are the ultimate storehouse of resources, ores, and even hostile mobs. Though more often than not, you have to dig around for a while before you stumble upon a cave system worth exploring. However, what if you could spawn and jump into one right away? That's exactly what happens in this amazing survival seed. It spawns you right next to two large cave openings, which lead to one of the largest networks of caves to ever exist. There are rare ores like diamonds, hostile mobs, and even hints of various cave biomes in the same place. The cave area spreads across hundreds of blocks and goes as deep as deepslate. The best part about this seed is that you dont even have to dig too much to get down to the deepest levels. However, we highly recommend you create some of these Minecraft potions before jumping into this dark resource heaven. Seed: -2366383524192462352 (Java & Bedrock) Desert villages are one of the simplest types of villages in the game. But this survival seed tries to change that. It gives us a multi-level village with houses that spawn in a staircase-like format. Plus, there are multiple lake caves in the same, which is ironic for a village situated in the desert. Not to forget, while the caves will be a great resource for you, they are a fatal trap for camels that spawn in this village. Seed: 6362205660132590711 Coordinates: -562, -75, -1064 (Java) As you might know, Witchs only spawn in the swamp biome, which often generates next to other forest-based biomes in the game. But in this survival seed, you get witches spawning in the middle of the ocean. You might miss its existence, so wait for the iconic witch water and two submerged trees. With such a random and incomplete biome, structures have almost no chance of spawning. But again, bending the rules, this survival seed gives us a witch hut in the oceanic swamps. Moreover, it is not floating on the water, instead, it has long wooden pillars keeping it in place. Finding another witch hut like this is close to impossible, so we suggest you visit the witch before they sail away. Seed: -2419527106680428309 Coordinates: -980, 70, -728 (Bedrock) Starting on an easy note, our first seed spawns us on a huge survival island with a dependable savannavillage on its edge. You can get food, wood, and all the basic resources to start your adventure right after spawning. After that, you can either venture into the rest of the world or stay on the island make a Nether portal and try to speedrun the game. Seed Code: -2927611868038818840 (Java) Coordinates:X:264 Z: -376 (Bedrock) VillageCoordinates:X:160 Z: -336 (Java) Now this is something you just have to see if youre playing on Java edition. Our spawn point is in a decently sized desert biome. Thankfully there are a couple of villages nearby where you can get food and company. When youre ready for an adventure, look the coordinates shown below that'll lead you to a massive and we mean massive cave where you could easily and safely fly around with your elytra. There you'll find an ancient city in the center thats surrounded by dripstone caves on one side. The cave creates an overhang above the city, covered with pointed dripstone and dripstone blocks. Not only that but the ceiling is made up of pointed dripstone, creating quite a scary scenery when youre at the bottom. Seed Code:1349971399 Ancient City Coordinates:X: -670 Y: -51 Z: 905 (Java) As the name suggests, this survival seed spawns you on an island village with water in all directions. But, unlike regular villages, you also have a rare complete shipwreck next to the village. Both of these structures are created to give you enough resources to get started. Though, when it comes to base building, you might want to explore the nearby islands. This feature is a much more resistant to spawning hostile mobs in Minecraft, even at night. Moreover, it also generates next to other forest-based biomes in the game. But in this survival seed, you get witches spawning in the middle of the ocean. You might miss its existence, so wait for the iconic witch water and two submerged trees. With such a random and incomplete biome, structures have almost no chance of spawning. There you'll find an ancient city in the center thats surrounded by dripstone caves on one side. The cave creates an overhang above the city, covered with pointed dripstone and dripstone blocks. Not only that but the ceiling is made up of pointed dripstone, creating quite a scary scenery when youre at the bottom. Seed Code:1349971399 Ancient City Coordinates:X: -670 Y: -51 Z: 905 (Java) As the name suggests, this survival seed spawns you on an island village with water in all directions. But, unlike regular villages, you also have a rare complete shipwreck next to the village. Both of these structures are created to give you enough resources to get started. Though, when it comes to base building, you might want to explore the nearby islands. This feature is a much more resistant to spawning hostile mobs in Minecraft, even at night. Moreover, it also generates next to other forest-based biomes in the game. But in this survival seed, you get witches spawning in the middle of the ocean. You might miss its existence, so wait for the iconic witch water and two submerged trees. With such a random and incomplete biome, structures have almost no chance of spawning. But again, bending the rules, this survival seed gives us a witch hut in the oceanic swamps. Moreover, it is not floating on the water, instead, it has long wooden pillars keeping it in place. Finding another witch hut like this is close to impossible, so we suggest you visit the witch before they sail away. Seed: -2419527106680428309 Coordinates: -980, 70, -728 (Bedrock) Starting on an easy note, our first seed spawns us on a huge survival island with a dependable savannavillage on its edge. You can get food, wood, and all the basic resources to start your adventure right after spawning. After that, you can either venture into the rest of the world or stay on the island make a Nether portal and try to speedrun the game. Seed Code: -2927611868038818840 (Java) Coordinates:X:264 Z: -376 (Bedrock) VillageCoordinates:X:160 Z: -336 (Java) Now this is something you just have to see if youre playing on Java edition. Our spawn point is in a decently sized desert biome. Thankfully there are a couple of villages nearby where you can get food and company. When youre ready for an adventure, look the coordinates shown below that'll lead you to a massive and we mean massive cave where you could easily and safely fly around with your elytra.
