The historic Brazzaville Declaration established a foundation for cooperation among the Congo Republic, Democratic Republic of Congo, and Indonesia on planned agriculture, oil and gas mining, and logging projects in the Cuvette Centrale region, the world's largest tropical peatland. The Global Peatlands Initiative, part of which is GLF/CIFOR, helped forge this deal. Recently, the Cuvette Centrale peatland was mapped by an international team of scientists, with findings detailed in a 2017 report released at the Global Landscapes Forum conference in Bonn, Germany. The AFR100 is a pan-African restoration effort to bring 100 million hectares of degraded landscapes under restoration by 2030. International partners including Australia, Indonesia, and Costa Rica launched the Blue Carbon Initiative at the 2015 Global Landscapes Forum in Paris. This partnership aims to share knowledge and accelerate action regarding coastal blue carbon ecosystems. The Africa Palm Oil Initiative (APOI) brought together nine Central and West African governments, as well as private sector, civil society, and indigenous groups, in a commitment to make this key industry sustainable and responsible. High-level representatives signed the pledge in Marrakesh, aiming for long-term, low-carbon development while socially beneficial and protecting tropical forests. The Global Peatlands Initiative was launched at the 2016 Global Landscapes Forum in Marrakesh as a new UN Environment-led multi-partner effort to save peatlands. The Tropical Landscapes Finance Facility (TLFF) provides access to long-term finance for smallholder producers, renewable energy production, and other sustainable investments. The GLF has been named an official core partner in preparation for the UN Decade on Ecosystem Restoration, 2021-2030. The Decade aims to harness the power of nature and local communities to achieve its mission of ending ecosystem degradation. The GLF also developed the Generation Restoration campaign and Restoration Steward program to ensure youth leadership in restoration. The global sustainable finance community converges at premier forums to share innovative land-based investment strategies, with a focus on impactful development and environmental projects. Notably, the first four Investment Case events in London (2015, 2016), Washington D.C. (2018), and Luxembourg (2019) attracted 1,800 in-person participants and thousands more online viewers, showcasing groundbreaking sustainable finance initiatives such as the Tropical Landscapes Financing Facility (TLFF) in Indonesia and the Land Degradation Neutrality (LDN) Fund. A collective of thirty-five leading development, environmental, farmer, rights, and research organizations have joined the Global Land Forum (GLF) Charter Members, pledging their commitment to advancing and mainstreaming the Landscape Approach to create resilient, productive, and prosperous landscapes. The Luxembourg-GLF Finance for Nature Platform is another notable example, aiming to redirect financial flows towards sustainable land-use models that prioritize environmental sustainability, equity, inclusivity, and profitability. The platform's collaboration between the Government of Luxembourg and GLF seeks to share knowledge on existing innovations, foster the development of new solutions, enhance the mainstreaming of sustainable finance for nature-based projects, and stimulate private sector engagement in sustainable land use financing.
