

Click to prove
you're human

once youve made an assignement you can regenrate all its question with just one click on the software. the new questions will be complety new but still follow the same parameters as the original ones. this feature makes it so powreful becuz you choose what type of questions you want, not the questions themselves. when a question is replaced, you get a fresh one that is similar to the origional. how it works: you can regenrate the whole assignement or just a group of question or even an individuall one. repace the entire assignement with just one click to the desirited length. this way you can give your students enought room to show their work by incresing the spacing or save paper by decreasing it. you also have manual control over the spacing. this feature is very useful when using a LCD projector or other display system becuz you can show 1 to four question at a time on the screen. use this feautre while teaching and prepare your examples with the software and then just display them on the board. this will save you time during planning and during the lesson, and it makes it very easy to present long questions or questions with graphs and diagrams. Questions created with our products can be added to existing assignments you have created with other programs or you can freshen old assignments by replacing old questions with new ones. You can export questions as bitmap images and paste them into your favorite word processing software, making it easy to integrate them into your lessons. Every question you create can be toggled between free-response and multiple-choice format, and multiple-choice questions come with smart choices that are based on common mistakes students make while others are just random but near the correct answer.
