Many countries, including the United States, have struggled with the message to public and political producers on the safety and effectiveness of HPV vaccine. Many people are not aware that it can prevent [six types of cancer. As a result, the absorption of, and adherence to, HPV vaccine has been low a l l over the world. The Global HPV Cancer Free Program: engage with global partners to develop a consistent message framework for HPV vaccination as cancer prevention enhancing the ability of the parties national to develop and launch effective education and communication programmes to promote the cable of cancer partners to take lead Gathering innovative partnerships to make the vaccine HPV PREVENTION PREVENTION PROGRAMMES AND RESULTS: Current work of India Analysis of the situation Half of the new cases of cervical cancer are diagnosed in women who have never tested or have rarely been tested. We can easily change this statistic. Share on Pinterestabout 8 to ten people in the United States will contract human Papillomavirus (HPV) Getty Images But more than 4.000 women will die of cervical cancer in 2019, reports the American cancer society. However, half the new cases of cervical cancer occur in women who have never been tested or have rarely been tested. "Dr. Jessica Shepherd, OB/ Gyn and gynaecological surgeon at the Baylor University Medical Center," he told Healthline. Of course you are taking a regular test is one of the best ways to protect your health. Cervical cancer is not only treatable, it is preventable. You don't have a family history of cancer, Shepherd says you could still be at risk. The US Prevention Services Task Force suggests that women of age including 21 Through 29 are screened with a PAP test every three years. For women from 30 to 65, the task force Be screened with one of the three tests: every 5 years with high-risk HPV test Aloneevery 5 years with PAP and HPV HPV high-risk co-testingvery 3 years with a PAP test alonefor women with certain risk factors, their doctors can recommend Screening more often or over 65 years. Á, á,~ Á «The herbal tests of cancer are covered by the act of economic assistance. This means you will not be responsible for a co-pay, deductible cost or other out-of-pocket costs, Á é á,~. "Shepherd said. Á é á,~" If you don't have a health insurance, there are clinics in the United States Which provide low or cost tests. Women, regardless of their circumstances, can and should be tested. At about 8 out of 10 people in the United States will contract the human papillomavirus (HPV) at some point in their lives. While most of the time the virus goes away alone, sometimes it remains and develops in cancer. Á é á,~ "HPV infections show no signs or symptoms, which means that most people have no idea that they have it. The virus can also remain unnoticed in your system for years. This is the Reason for which it is so important to be tested, Á é á,~. "Shepherd said. To encourage people to take a heart screening seriousness, ours we can change this statistical campaign suggests that women go to your doctor every year and ask for the HPV test and test together. Á, á,~ "when you think about how screening through PAP and HPV tests can really detect cervical cancer before it becomes the á é
